

TDS AND TANK SWITCHING MOTORIZED VALVE

- 1 Valve is constructed of 304 stainless steel, making it a superior choice over other valves constructed of brass. No unwanted taste distortion.
- 2 Very quiet when in operation. No continuous duty heat generated. Automatically cuts power when a rotation has been completed.
- 3 Contains a manual operation knob in the event of electrical failure. Valve direction of flow can be manually rotated
- 4 An additional valve/valves can be utilized to automate tank selectors and fill multiple fresh water tanks with a push of a switch.
